## Level 2 Certificate FURTHER MATHEMATICS 8365/1

Paper 1 Non-Calculator

Mark scheme

June 2023

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

### **Glossary for Mark Schemes**

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

М	Method marks are awarded for a correct method which could lead to a correct answer.
М dep	A method mark dependent on a previous method mark being awarded.
Α	Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
В	Marks awarded independent of method.
B dep	A mark that can only be awarded if a previous independent mark has been awarded.
ft	Follow through marks. Marks awarded following a mistake in an earlier step.
SC	Special case. Marks awarded within the scheme for a common misinterpretation which has some mathematical worth.
oe	Or equivalent. Accept answers that are equivalent.
	eg accept 0.5 as well as $\frac{1}{2}$
[a, b]	Accept values between <i>a</i> and <i>b</i> inclusive.
3.14	Accept answers which begin 3.14 eg 3.14, 3.142, 3.1416

Examiners should consistently apply the following principles.

#### Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

#### Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a candidate has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the candidate. In cases where there is no doubt that the answer has come from incorrect working then the candidate should be penalised.

#### Questions which ask candidates to show working

Instructions on marking will be given but usually marks are not awarded to candidates who show no working.

#### Questions which do not ask candidates to show working

As a general principle, a correct response is awarded full marks.

#### Misread or miscopy

Candidates often copy values from a question incorrectly. If the examiner thinks that the candidate has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

#### Further work

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

#### Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

#### Work not replaced

Erased or crossed out work that is still legible should be marked.

#### Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

#### Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

#### **Continental notation**

Accept a comma used instead of a decimal point (for example, in measurements or currency), provided that it is clear to the examiner that the candidate intended it to be a decimal point.

Q	Answer	Mark	Comments
1(a)	2x + 1 = -5 or $2x = -6$ or $f^{-1}(x) = \frac{x - 1}{2}$	M1	
	<i>x</i> = -3	A1	
	Addi	tional Guio	dance
	Correct answer not from incorrect working		M1 A1
	f(x) = 5 followed by $x = 2$	SC1	

Q	Answer	Mark	Com	ments
	Alternative method 1			
	(g(3) =) 9	B1	may be implied by 19 if no other working	
	19 or f [their g(3)] correctly evaluated	B1ft	any incorrect value for g(3) used correctly in f. Must be evidence of g t gain this mark (can't be f(anything))	
	Alternative method 2			
	$(fg(x) =) 2x^2 + 1 \text{ or } 2 \times 3^2 + 1$	$Bx^2 + 1$ or $2 \times 3^2 + 1$ B1 may be implied by 19 if no of working		
	19	B1ft		
1(b)	Additional Guidance			
	49 from gf(x) on answer line			SC1
	Common errors from Alt 2 will come from getting $fg(x)$ incorrect and might include (but must include the function clearly stated): $fg(x) = 4x^2 + 1$ followed by $fg(3) = 37$ $fg(x) = x^2(2x + 1)$ followed by $fg(3) = 63$			B0 B1ft
	ff( <i>x</i> ) doesn't get any marks			B0 B0
	Common errors from Alt 1 will come from getting $g(x)$ incorrect and might include			D0 D4#
	g(3) = 6 then $fg(3) = 13$			ΒΟ ΒΊΙΙ
	g(3) = 3 then $fg(3) = 7$			

Q	Answer	Mark	Com	ments
2	3 <i>xy</i> (2 <i>x</i> + 7)	В2	B1 for any factor ta $3(2x^2y + 7xy)$ or x(6xy + 21y) or $y(6x^2 + 21x)$ or 3x(2xy + 7y) or $3y(2x^2 + 7x)$ or xy(6x + 21) B1 for correct high with one term incom 3xy(a + 7) or 3xy(2x + b)	est common factor rrect in the bracket
	Addi	tional Gui	dance	
	Condone final bracket missing			
	Condone multiplication signs			
	Condone changing order of terms eg $3(2x + 7)xy$ (3xy + 0)(2x + 7) or $(3xy + )(2x + 7)$ or $3xy$ and $(2x + 7)$ seen but not together			
				SC1

Q	Answer	Mark	Comments
3(a)	$\begin{pmatrix} 0 & -1 \\ -1 & 0 \end{pmatrix}$	B1	
	Addi	tional Guio	dance

Q	Answer	Mark	Comments
	$\begin{pmatrix} 2 \times -3 + 4 \times 1 & 2 \times -4 + 4 \times 2 \\ -1 \times -3 + -3 \times 1 & -1 \times -4 + -3 \times 2 \end{pmatrix} \text{ or } \\ \text{or } \begin{pmatrix} -6 + 4 & -8 + 8 \\ 3 - 3 & 4 - 6 \end{pmatrix} \text{ or } \begin{pmatrix} -2 & 0 \\ 0 & -2 \end{pmatrix} $	M1	allow M1 for any three correct calculations or any three correct terms in the matrix calculations don't need to be in a matrix condone missing brackets
3(b)	$-2\begin{pmatrix}1&0\\0&1\end{pmatrix}(=-2\mathbf{I})$	A1	may be written as $k \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}$ where $k = -2$
	Addi	tional Guio	Jance
	Errors in identity matrix will be penalised	eg 2 $\begin{pmatrix} -1\\ 0 \end{pmatrix}$	$\begin{pmatrix} 0 \\ -1 \end{pmatrix} \text{ or } \begin{pmatrix} k & 0 \\ 0 & k \end{pmatrix} \text{ are }$
	insufficient for A1		
	Must be evidence of identity matrix for A mark eg $\begin{pmatrix} -2 & 0 \\ 0 & -2 \end{pmatrix}$ and $k = -2$		M1 A0

Q	Answer	Mark	Com	ments
	$\frac{24}{7 - 5} \text{ or } \frac{6}{2}$ or $\frac{-4 - 2}{5 - 7} \text{ or } \frac{-6}{-2}$	M1	oe these calculations may appear in a diagram but there needs to be evidence of subtraction and division taking place to gain M1 if A0	
	3	A1	3 only (no <i>x</i> )	
4(a)	Addi			
	Could use $y = mx + c$ then simultaneous completed correctly then full marks	M1 A1		
	If the simultaneous equations method is	M0 A0		
	Correct answer from graphical method or	M1 A1		
	(y=) $3x$ or $3x - k$ on answer line	M1 A0		

Q	Answer	Mark	Com	ments
	$(7-5)^2 + (24)^2$ or $2^2 + 6^2$ or $4 + 36$	M1	may be seen on a diagram ft differences from Q4(a) for this mark only (must be numbers used in Q4a and not equivalents – see Additional Guidance)	
	$\sqrt{40}$ or $\sqrt{4} \times \sqrt{10}$	M1dep		
4(b)	2√10	A1	just $a = 2$ and $b = 1$ enough for A1 (unlow working)	10 would not be ess $2\sqrt{10}$ in
	Additional Guidance			
	Penalise incorrect further working			
	Example of ft from Q4(a) would be $m = \frac{6}{12}$ so [(ST) <sup>2</sup> =] 6 <sup>2</sup> + 12 <sup>2</sup>		M1 M0 A0	
	But $m = \frac{6}{12}$ then cancelled and so [(ST) <sup>2</sup> =] 1 <sup>2</sup> + 2 <sup>2</sup>			M0 M0 A0

Q	Answer	Mark	Com	ments	
	(n+1)() or $n^2 + n - n - 1$ or $n^2 - 1$ or $n^2 + 2n + n + 2$ or $n^2 + 3n + 2$	f $(n + 1)$ taken out tract			
	(n+1)(n+2-(n-1)) or $n^{2}+2n+n+2-(n^{2}-n+n-1)$	cted vertically			
	(n+1)(n+2-n+1) = 3(n+1) or $3n+3orn^2 + 3n + 2 - n^2 + 1 = 3n + 3 or 3(n+1)$	A1	no statement needed at end of proof		
5	Addi				
	$X_n - Y_n$ can be awarded method marks b	s rescued at the end	M2 A0		
	eg recovery $-3(n + 1)$ so $Y_n - X_n$ is a mul	tiple of 3		M2 A1	
	Missing brackets can be recovered later recovered then second M should not be a show recovery	M2 A1			
	eg $n^2 + 3n + 3 - n^2 - 1$ (error in $X_n$ but Y	M1 M0 A0			
	Condone use of <i>x</i> (or other letter) instead of <i>n</i> . A mixture of letters would only gain M1. However $Y_n - X_n = 3(n + 1) = 3x$ would be acceptable to show a multiple of 3				

Q	Answer	Mark	Com	nments	
	$6x^5 + 8x$	M1	either term correct ignore LHS		
	$6 \times 1^5 + 8 \times 1$ or 14	all needs to be cor	rect (no ft)		
	$-2 = (\text{their 14}) \times 1 + c$ or y2 = (their 14) (x - 1)	M1	x + c of differentiation to		
6	y = 14x - 16	A1			
	Addi	tional Guio	lance		
	Negative reciprocal of 14 to find the normal ie. $-2 = \frac{-1}{14} \times 1 + c$ or $y2 = \frac{-1}{14}$ (2)	M3 A0			
	14 14 from incorrect differentiation				
	eg $6x^4$ + 8 in differentiation with correct an eg $6x^4$ + 8x in differentiation with correct a	M0 M0 M1 A0 M1 M0 M1 A0			

Q	Answer	Mark	Comments	
	(Cone =) $\frac{1}{3}\pi r^2 x$ or (Prism =) $\frac{1}{2}y^2 x$	M1	could appear in M1 dep working height must be $x$	
	$\frac{1}{3}\pi r^2 x = 2y^2 x$	M1dep	for correctly processing the 4 must be a correct equation oe eg $\frac{\frac{1}{3} \times \pi r^2 \times x}{2} = \frac{2y^2 \times x}{2}$ or $\frac{\pi r^2 \times x}{6} = \frac{2y^2 \times x}{2}$ $\frac{1}{3}\pi r^2 x = 4 (\frac{1}{2}y^2 x)$ is not enough for M1 here because the 4 has not been processed	
7	$\frac{1}{3}\pi r^{2} = 2y^{2}  \text{or}  r^{2} = \frac{6y^{2}}{\pi}$ or $\frac{1}{3}r^{2} = \frac{2y^{2}}{\pi}  \text{or}  \pi r^{2} = 6y^{2}$	М1	oe for eliminating <i>x</i> dependent on both formulae being correct may have been numerical errors in previous M mark allow multiplication signs unprocessed numerical values can be condoned	
	$r = \sqrt{\frac{6}{\pi}} y$ or $r = \sqrt{\frac{6y^2}{\pi}}$	A1	numbers need to be simplified $\sqrt{\frac{12y^2}{2\pi}}$ or $\sqrt{\frac{2y^2}{\frac{1}{3}\pi}}$ are A0 ensure that root is over the whole fraction (or separate roots over the numerator and denominator)	
	Additional Guidance on next page			

Additional Guidance	
$r = \sqrt{\frac{6y^2x}{\pi x}}$	M1 M1 M0 A0
$\frac{4}{3}\pi r^{2}x = \frac{1}{2}y^{2}x  \text{(multiplying the wrong side by 4) followed by}$ eg $\frac{4}{3}\pi r^{2} = \frac{1}{2}y^{2} \text{ or } 8r^{2} = \frac{3y^{2}}{\pi} \text{ or } \frac{4}{3}r^{2} = \frac{y^{2}}{2\pi} \text{ or } \pi r^{2} = \frac{3}{8}y^{2}$	M1 M0 M1 A0
Penalise $\pm$ on answer line	M3 A0
Either formula incorrect would result in maximum mark of M1	M1 M0 M0 A0
Possible restarts could use both correct formulae	

Q	Answer	Mark	Comments	
	Alternative method 1			
	$x^2 + y^2 = 25$	B1	oe equation of circle eg $x^{2} + y^{2} = 5^{2}$ eg $(x - 0)^{2} + (y - 0)^{2} = 25$	
	$(2y-5)^2 + y^2$	M1	must be $2y - 5$ substituted into $x^2 + y^2$	
	$(4y^2 - 20y + 25) + y^2$	M1	oe ft their $2y - 5$ correctly expanded	
	$5y^2 - 20y = 0$ or $y^2 - 4y = 0$ or $5y(y - 4) = 0$ or $y(y - 4) = 0$	M1dep	oe (dependent on B1 M2) must be fully correct (no ft)	
	y = 0 and $y = 4or (-5, 0) or (3, 4)$	A1		
	(–5 , 0) and (3 , 4)	A1		
	Alternative method 2			
8	$x^2 + y^2 = 25$	B1	oe equation of circle eg $x^{2} + y^{2} = 5^{2}$ eg $(x - 0)^{2} + (y - 0)^{2} = 25$	
	$x^2 + \left(\frac{x+5}{2}\right)^2$	M1	must be $\left(\frac{x+5}{2}\right)$ substituted into $x^2 + y^2$	
	$x^{2} + \left(\frac{x^{2} + 10x + 25}{4}\right)$ or $4x^{2} + x^{2} + 10x + 25  (= 100)$	M1	oe ft their $\left(\frac{x+5}{2}\right)$ correctly expanded	
	$5x^2 + 10x - 75 = 0$ or $x^2 + 2x - 15 = 0$ or $(x - 3)(x + 5) = 0$	M1dep	oe (dependent on B1 M2) must be fully correct (no ft)	
	x = 3 and $x = -5or (-5, 0) or (3, 4)$	A1		
	(-5 , 0) and (3 , 4)	A1		
	Additional Guidance on next page			

	Additional Guidance				
	Answer could be written as $x = -5$ , $y = 0$ and $x = 3$ , $y = 4$	B1 M3 A2			
	Answer with no working (for M3) or from trying to draw an accurate graph or T&I	B0 M0 A0			
	Incorrect circle equation can still score 2 marks	B0 M2 M0 A0 A0			
	eg. $x^2 + y^2 = 10$	B0			
	$x^2 + \left(\frac{x+5}{2}\right)^2$	M1			
8 (cont'd)	$4x^2 + x^2 + 10x + 25 = 40$	M1			
(oone a)	$5x^2 + 10x - 15 = 0$	MO			
	(x + 3) (x - 1) = 0				
	x = -3 and $x = 1$	A0			
	y = 1  and  y = 3	A0			
	Correct answer can be gained by using the incorrect substitution				
	x = 5 - 2y				
	Candidates that rearrange $x^2 + y^2 = 25$ correctly and substitute into $2y = x + 5$ will gain first M mark. They should then follow main scheme for other marks	B1 M1			

Q	Answer	Mark	Comments		
	$w(y^2 - 2) = y^2 + 5$	M1			
	$wy^2 - 2w = y^2 + 5$	M1dep			
	$y^2(w-1) = 2w + 5$		rearranges and factorises		
	or $y^2 = \frac{(2w+5)}{(w-1)}$				
	or $y^2 (-w + 1) = -2w - 5$	M1dep			
	or $y^2 = \frac{(-2w-5)}{(-w+1)}$				
9	$y = (\pm) \sqrt{\frac{(2w+5)}{(w-1)}}$				
	or $y = (\pm) \sqrt{\frac{(-2w-5)}{(-w+1)}}$				
	Additional Guidance				
	Root must cover the whole function for fir	r separate roots			
	over both numerator and denominator)				
	Must be $y =$				
	If correct answer in working then $y = lost$ on the answer line then transcription error so A1 can be awarded				
	Penalise incorrect further working				

Q	Answer	Mark	Comments
	$\frac{\left(1+\sqrt{5}\right)\left(3+\sqrt{5}\right)}{\left(3-\sqrt{5}\right)\left(3+\sqrt{5}\right)}$	M1	oe $\frac{(1+\sqrt{5})(-3-\sqrt{5})}{(3-\sqrt{5})(-3-\sqrt{5})}$ (if this method is used then follow equivalent MS for -4 and $-3-5-\sqrt{5}-3\sqrt{5}$ ) could be seen separately or in a grid
	Denominator = 4 or $9-5$	M1dep	
10	Numerator $3+5+\sqrt{5}+3\sqrt{5}$	M1dep	oe any 3 terms out of 4 correct (terms may have already been simplified eg $3+4\sqrt{5}$ just one error so M1dep) do not accept $\sqrt{5}$ $\sqrt{5}$ or $\sqrt{25}$ for 5 this would be one error could be implied from $\frac{8+4\sqrt{5}}{4}$ only dependent on first M mark
	2+√5	A1	condone $2+1\sqrt{5}$ don't condone $\frac{2+\sqrt{5}}{1}$
	Additional Guidance		
	Untidy mathematical notation can be cond	doned as lo	ong as it's recovered

Q	Answer	Mark	Com	ments
	$\left(\frac{\mathrm{d}y}{\mathrm{d}x}\right) = \frac{x^3}{3} + 6x$	M1	oe eg $\frac{4}{12} x^3$ either term correct ignore LHS	
11	$\left(\frac{d^2 y}{dx^2}\right) x^2 + 6$ or $x^2 + 6 = 55$	M1dep	oe eg $x^2 = 49$ must come from fully correct first M	
	7	A1	do not accept –7 or	· ±7
	Additional Guidance			
	M1 dep (and hence A1) can only be gained if the first M mark is fully correct (no incorrect terms and no additional terms)			
	eg an answer of $\frac{1}{3}x^3 + 6x + 4$ would be allowed for M1 but as it's not fully correct would lose the following 2 marks			M1 M0 A0

Q	Answer	Mark	Comments	
	$(x = ) 270^{\circ}$	B1		
	Additional Guidance			
12(a)	Do not accept answers outside of the given range or a choice of answers			
	Condone ° missing			

Q	Answer	Mark	Com	ments
12(b)	$\tan y = \frac{1}{\sqrt{3}}$ or $\tan y = \frac{\sqrt{3}}{3}$ or $y = \tan^{-1} \frac{\sqrt{3}}{3}$ or $y = \tan^{-1} \frac{1}{\sqrt{3}}$	M1		
	(y = ) 30° or 210°	M1dep	could include up to values or 30° may be seen as calculation or on a embedded in tan 30° tan 30° embedded exact trigonometric identified) would no	two further incorrect s part of a further diagram or 0° in a table with other values (and not ot gain M1dep
	$(y = ) 30^{\circ} \text{ and } 210^{\circ}$	A1		
	Addi	Additional Guidance		
	Correct answer could come from incorrect working			M0 A0
	30° with no working			M2
	30° and 210° with no working			M2 A1

Q	Answer	Mark	Comments	
	Common denominator found and used for all terms at some point during the method and at least one new numerator correct for that denominator	M1	eg $\frac{6x-9}{3x} - \frac{1}{3x} + \frac{3x}{3x}$ or $\frac{3x(2x-3)}{3x^2} - \frac{x}{3x^2} + \frac{3x^2}{3x^2}$ or $\frac{6x-10}{3x} + \frac{3x}{3x}$	
13	Numerator of $6x-9-1+3x$ for denominator of $3x$ or numerator of $6x^2-9x-x+3x^2$ for denominator of $3x^2$	M1dep	oe – will depend on the denominator but all numerator terms must be corre- for the denominator used. could be a single fraction or separate fractions with the same denominator	
	$\frac{9x-10}{3x}$	A1	$3 - \frac{10}{3x}$ is not a single fraction so is A0	
	Addi	tional Guio	Jance	
	Penalise incorrect further working	M2 A0		

Q	Answer	Mark	Com	ments	
	$3x^2 - 10x + 8$ or $-3x^2 + 10x - 8$	M1			
	Factorising $(3x - 4)(x - 2)$ or completing the square $\left(x - \frac{5}{3}\right)^2 - \frac{1}{9}$ or $3\left(x - \frac{5}{3}\right)^2 - \frac{1}{3}$ or formula $\frac{10 \pm \sqrt{4}}{6}$	M1dep	(3 <i>x</i> – 4)(3 <i>x</i> – 6) is a M1dep here	cceptable for	
	$\frac{4}{3}$ and 2	M1 dep	oe – such as 1.ḋ c can be seen in any (correct or incorrec	or $1\frac{1}{3}$ or $\frac{4}{3}$ or $\frac{8}{6}$ format or inequality t) eg $\frac{4}{3} > x$	
14	$\frac{4}{3} \leqslant x \leqslant 2$	A1	oe – could be writte inequalities but do stage as an oe $\frac{4}{3} \le x$ and $x \le 2$ must see the word incorrect inequality	en as two separate not accept $\frac{8}{6}$ at this 'and' in this format signs is A0	
	Additional Guidance				
	Candidates may presume that there may be a negative solution and reverse the inequality They may however work this through and then realise it is giving the			M3 A0 M3 A1	
	incorrect values when they test it. They can then correct themselves to still gain full marks				
	Students attempting T&I to get the solutions to get M3. If they then put that i be M3 A1	ons would r nto the corr	need to get both rect inequality it will	M3 A0 or M3 A1	

Q	Answer	Mark	Com	ments
	$x - x^2 - x^2 + x^3$ (= $x^2 + x$ )		allow error in 1 tern missing terms (coul	h but must not have d be seen in a grid) $x = 2r^2 + r^3$ then
		M1	M1	$\Delta x - \Delta x + x$ then
			if they go straight to where $k$ is not 2 the more than one erro	$b x - kx^2 + x^3$ on this could be r so M0
	$x^3 - 3x^2 = 0$	Madaa	no ft	
	or $x^3 = 3x^2$	мтаер		
	$x^{2}(x-3)(=0)$	M1	factorising their equation fully and correctly (must have $x^3$ plus/minus other term(s) in $x^n$ where n $\neq$ 0).	
	(x =) 0 and (x =) 3	A1	condone $x = 0$ $x = 0$ $x = 3$	
	Addi			
	First M mark could be done in root form bu with $x - x^2 - x^2 + x^3$ (= $x^2 + x$ ) for M1			
15	Candidates may divide by <i>x</i> at some point this and state that $x = 0$ is a solution at this continued to a correct outcome for full mar would be M1dep and $x(x - 3)(= 0)$ would b eg $x - x^2 - x^2 + x^3 = x^2 + x$ $1 - x - x + x^2 = x + 1$ with $x = 0$ $x^2 - 3x = 0$ If they do not state $x = 0$ is a solution and of then award full marks but if it's not stated at solution then no further marks available as eg $x - x^2 - x^2 + x^3 = x^2 + x$ $1 - x - x + x^2 = x + 1$ (no mention of $x = 0$ $x^2 - 3x = 0$	during the s point, the ks or $x^2 - 3$ e the third continue to and they do s soon as the being a pos	method. If they do method can be $3x = 0$ or $x^2 = 3x$ M mark a correct solution on't get to the correct ne division is done assible solution)	M1 M1dep M1 M0dep
	If no other marks awarded then $x = 0$ or $x = 3$ seen on answer line (or the last thing they have written)			SC1
	x = 0 and $x = 3$ not from incorrect working			M3 A1

Q	Answer	Mark	Com	ments
	(1 4) 6 (4 1) or (1) 3 (3 1) seen and used correctly (in correct place in expansion) as part of Pascal's triangle or $\begin{pmatrix} 4 \\ 2 \end{pmatrix}$ or ${}^{4}C_{2}$ or $\begin{pmatrix} 3 \\ 1 \end{pmatrix}$ or ${}^{3}C_{1}$ or $\begin{pmatrix} 3 \\ 2 \end{pmatrix}$ or ${}^{3}C_{2}$ seen and used	B1	$6(1^2)12x^2$ would be B1 $6(1^2)12^2x^2$ would be B1 leading onto M1dep $6(1^2) + 12x^2$ would be B0 or equivalent in other expansion	
	$6 \times 12 \times 12 (\times x^2)$ or $864(\times x^2)$	M1dep	oe could be within an expansion dependent on B mark only	
16	$3 \times a \times 4 \times 4(\times x^2)$ or $48a(\times x^2)$	M1dep	oe could be within an expansion dependent on B mark only	
	18	A1		
	Additional Guidance			
	(1) 3 (3 1) used in $(1 + 12x)^4$ would gain no marks			В0
	Either M mark implies the B mark			
	Candidates attempting to expand the brackets will need to get either M mark to get the B mark. They could have made errors in their expansions as long as they get $864x^2$ or $48ax^2$			

Q	Answer	Mark	Con	nments
	$\left(\frac{\mathrm{d}y}{\mathrm{d}x}\right) = 3ax^2 + 2bx$	M1	either term correct ignore LHS	
	$3a(-2)^{2} + 2b(-2) = 0$ or $12a - 4b = 0  \text{or } 3a - b = 0$ or $3a(-2)^{2} + 2(1+2a)(-2) = 0$ (this would come from doing the third M mark before the differentiation)	M1dep	when $\frac{dy}{dx} = 0$ oe can follow through M mark (as long as two terms in $x^n$ )	from an error in first s there are at least
17	$11 = a(-2)^{3} + b(-2)^{2} + 7$ or $-8a + 4b = 4$ or $-2a + b = 1$ or $11 = a(-2)^{3} + 3a(4) + 7$	M1	oe	
	a = 1  or  b = 3	A1	dependent on M3 awarded	
	a = 1 and $b = 3$	A1		
	Additional Guidance			
	Correct answer could come from incorrect working (follow usual			
	guidance)			
	a = 1 and $b = 3$ not from incorrect working will be full marks			M3 A2
	Only one correct answer without working i	s 0 marks		M0 A0

Q	Answer	Mark	Comments	
	Alternative Method 1 – Elimination of $x$ from the first 2 equations			
	Correctly setting up two equations to eliminate <i>x</i> with an attempt to add or subtract from first two equations	M1	eg $2(x+3z) - (2x+y)$	
	Correct method and terms to eliminate a second variable	M1dep	eg (6 $z - y$ ) – 6( $z - 2y$ )	
	Correctly eliminating a variable from their two correct equations to form an equation in one variable	M1dep	eg $y - 12y = 9 - 42$ or $11y = 33$ or $y = 3$	
	Two correct values with working seen	A1	eg $y = 3$ and $x = 5$	
	x = 5 and $y = 3$ and $z = -1$ with correct working seen	A1	oe	
	Additional Guidance			
	For first two M marks LHS manipulation only required		M2	
	All three M marks can be combined in one equation:			
	ie $2(x + 3z) - (2x + y) - 6(z - 2y) = 11y$			M3
18	and $11y = 33$ and $y = 3$			
	May be multiple attempts. M marks can be awarded for best attempt but A marks would have to be from answers chosen			
	Stop marking after first error on LHS (but check for restarts)			
	Stop marking as soon as T&I/inspection methods begin (but check for restarts)			
	Alternative Method 2 – Elimination of <i>y</i> from 2 equations			
	Correctly setting up two equations to eliminate $y$ with an attempt to add or subtract from two equations	M1	eg $2(2x + y) + (z - 2y)$	
	Correct method and terms to eliminate a second variable	M1dep	eg $(4x + z) - 4(x + 3z)$	
	Correctly eliminating a variable from their two correct equations to form an equation in one variable	M1dep	eg $z - 12z = -7 + 18$ or $-11z = 11$ or $z = -1$	
	Two correct values with working seen	A1	eg $z = -1$ and $x = 5$	
	x = 5 and $y = 3$ and $z = -1$ with correct working seen	A1	oe	

Additional Guidance			
For first two M marks LHS manipulation only required	M2		
All three M marks can be combined in one equation:			
ie $2(x + 3z) - (2x + y) - 6(z - 2y) = 11y$	М3		
and $11y = 33$ and $y = 3$			
May be multiple attempts. M marks can be awarded for best attempt but A marks would have to be from answers chosen			
Stop marking after first error on LHS (but check for restarts)			
Stop marking as soon as T&I/inspection methods begin (but check for restarts)			

Q	Answer	Mark	Comments		
	Alternative Method 3 – Elimination of $z$ from 2 equations				
	Correctly setting up two equations to eliminate $z$ with an attempt to add or subtract from two equations	M1	eg $(x + 3z) - 3(z - 2y)$		
	Correct method and terms to eliminate a second variable	M1dep	eg $2(x + 6y) - (2x + y)$		
	Correctly eliminating a variable from their two correct equations to form an equation in one variable	M1dep	eg $y - 12y = 9 - 42$ or $11y = 33$ or $y = 3$		
	Two correct values with working seen	A1	eg $y = 3$ and $x = 5$		
18 (cont'd)	x = 5 and $y = 3$ and $z = -1$ with correct working seen	A1	oe		
(cont d)	Additional Guidance				
	For first two M marks LHS manipulation only required			M2	
	All three M marks can be combined in one equation:				
	ie $2(x + 3z) - (2x + y) - 6(z - 2y) = 11y$			M3	
	and $11y = 33$ and $y = 3$				
	May be multiple attempts. M marks can be awarded for best attempt but A marks would have to be from answers chosen				
	Stop marking after first error on LHS (but check for restarts)				
	Stop marking as soon as T&I/inspection methods begin (but check for restarts)				

Alternative Method 4 – Substitution	Alternative Method 4 – Substitution			
One equation rearranged and correctly substituted into a second equation to eliminate an unknown	M1	eg $x = 2 - 3z$ and $2(2 - 3z) + y$		
Two correct equations formed with the same two unknowns in each equation (must be simplified correctly) and one equation rearranged so it can be substituted into the second equation	M1dep	eg $-6z + y = 9$ and $z = 2y - 7$		
Correctly eliminating a variable from their two correct equations to form an equation in one variable	M1dep	eg $-6(2y-7) + y = 9$ or $-11y = -33$ or $y = -33$	y = 3	
Two correct values with working seen	A1	eg $z = -1$ and $y = 3$	3	
x = 5 and $y = 3$ and $z = -1$ with correct working seen	A1	oe		
Addi	Additional Guidance			
Could use a combination of elimination a Stop marking after first error	Could use a combination of elimination and substitution at any point. Stop marking after first error			
May be multiple attempts. M marks can be A marks would have to be from answers	May be multiple attempts. M marks can be awarded for best attempt but A marks would have to be from answers chosen			
Stop marking as soon as T&I/inspection methods begin (but check for restarts)
